

PROJECT: Web Scraping using Python

Tools Used:

- Python
- BeautifulSoup
- Pandas
- Requests

Objective:

To extract book details such as title, price, and rating from a website and store the data in CSV format.

Process:

1. Sent HTTP request using requests library.
2. Parsed HTML using BeautifulSoup.
3. Extracted required data fields.
4. Stored data using pandas.
5. Exported dataset to CSV file.

Outcome:

Successfully created a structured dataset from website data.
